## ARC LIGHT

Although the appearance of the new ARC LIGHT Tunnel fan from ABYSM is white and when you switch off, when it starts to spin you will be amazed by the ARGB \* play of lights it displays. The 9-blade design and its 120 mm guarantee a stable air flow and a large air volume with very low noise levels. It includes temperature sensor and PWM with 4pin connector works intelligently to meet the cooling demands of the system.

Compatible with 3 or 5 fan kits that include a controller and remote control to configure the lighting or fan speed and customize your computer to upgrade it to the high level.

\* ARGB function is supported by ARGB controller and motherboards with supported software.
